Acceptance Criteria	**All layout, interaction behavior, messages, visual styling, and user feedback** will strictly follow the **Figma design** as the single source of truth.		

Filled Example:

Field	Details	
Description (Value)	**As an** Organization Super Admin / Admin **I want** to be able to create workflows in the organization admin portal **So that** I can have a standardized workflows to use across my different projects	
Roles & Permissions	**Role**	**Permissions**
	Org: Super Admin - Admin	• Create Workflow
Design Link	Create Workflow Figma Link	
User Flows	Create Workflow User Flow	
Responsiveness	Screen Layout	
Design Details	**Create Workflow Modal:** • Workflow Name must be: ◦ Unique ◦ Max Characters: 60 Characters • Workflow Key must be: ◦ Unique ◦ Contains Letters & Numbers Only ◦ Max Characters: 4 Characters ◦ Min Characters: 2 Characters ◦ It will be generated automatically from the first letter of each word written in the Workflow Name and the user can edit it too while he is in the modal. The user can't change it later even if he renamed the workflow completely, the key will remain the same. ◦ Tooltip: ▪ Text: Choose a short prefix to help group items related to this workflow.	

        - Placement: Top Center
- To check whether the name and key are unique or not, the user has to click on “Create Workflow” Button. When the system checks, if it found that they are already taken, the error will appear in the Input Field as an Error State.

Modal Errors:

- There are 2 types of errors that could appear inside the modal:
    - First: Errors that appear **before** clicking on “Create Workflow” Button:
        - If 1 letter only is written in the key, this error message should appear under the input field: “Key must be at least 2 characters long.”
        - If a special character is written in the key, this error message should appear under the input field: “Key can only contain letters and numbers.
    - Second: Errors that appear **after** clicking on “Create Workflow” Button:
        - If the name is not unique, the system will check this after clicking on “Create Workflow” Button, and this error message should appear under the input field: “This workflow name is already taken.”
        - If the key is not unique, the system will check this after clicking on “Create Workflow” Button, and this error message should appear under the input field: “This workflow key is already taken.”

Workflow Builder:

- After the workflow is created successfully, the Workflow Builder will be opened, and the Creation’s Confirmation Toast will appear inside it.
- This workflow by default will be saved as "Draft"
- The Workflow Builder is divided mainly into 2 parts:
    a. **Workflow Header** which is also divided into 2 parts:
        i. Actions Bar:

- Return Icon, by clicking it the user will go to the “Draft” Screen and all changes will be saved.
- By clicking the workflow name and icon area, the user will be able to rename the workflow.
- Draft Tag, indicates that this workflow is currently in draft.
- Saved Status, indicates that all changes are saved.
  - It could be “Saving”, which indicates that the changes are being saved.
  - It could be “Internet Connection Lost”, which indicates that the changes can’t be saved at the moment due to losing the connection.
  - If the state = “Internet Connection Lost”, then the “Publish Workflow” Button will be disabled.
  - Autosaving happens every **30 seconds** if the user **did changes.**
  - After 28 seconds, "Saving" status should appear and last for 2 seconds, then the “Saved” status will appear and last for 3 seconds. Then no status should appear for the upcoming 28 seconds. Then the process will repeat.
- “Publish Workflow” Button: It is disabled in the beginning, it will be enabled only if the user completed the requirements needed for publishing the workflow as mentioned here: [Workflow Requirements](), after clicking, all changed will be saved automatically.
- Options Dropdown Menu which includes:
  - Download
  - Archive

ii. Tools Bar:

- Undo: Disabled in the beginning, but it got enabled after the user starts doing anything.
- Redo: Always disabled until an undo happens.
- Zoom Dropdown Menu which includes:

		◦ Actual Size ◦ Fit to Page ◦ 25%, 50%, 75%, 100%, 125%, 150%, 175%, 200% • “Zoom In” Button: Increase 25% • “Zoom Out” Button: Decrease 25% b. **Workflow Content** which is also divided into 2 parts: Diagram - Text Panel For now, we will keep those 2 parts as designed by Omer Saleem, and we will enhance their UI later.	
Components	**New Components**	• N/A	
	Updated Components	• N/A	
Edge Cases	**Case**	**Description**	**Screen Number**
	Workflow name already exists	If the workflow name is already taken, this error should appear under the input field: “This workflow name is already taken.”	1.3.1
	Workflow key already exists	If the workflow key is already taken, this error should appear under the input field: “This workflow key is already taken.”	1.3.2
	Workflow key incorrect format	If a special character is written in the key, this error message should appear under the input field: “Key can only contain letters and numbers.	1.3.3

	Workflow key has 1 character only	If 1 letter only is written in the key, this error message should appear under the input field: “Key must be at least 2 characters long.”	1.3.4
Notifications	• Toasts: Workflow Created - Workflow Published		
Dependencies	N/A		
Impacts	• While **Renaming** Workflow/Project/...etc, the key won’t be affected and it will be kept the same that was done while creation. • Checking key uniqueness either in Workflow/Project/...etc will be done after the user clicks on the “Create” Button, and if there is an error, it will appear in the input field as an Error state.		
Acceptance Criteria	**All layout, interaction behavior, messages, visual styling, and user feedback** will strictly follow the **Figma design** as the single source of truth.
