Roles & Permissions

🔍 Overview

As part of the system restructuring, we have introduced a refined **Roles & Permissions Model** to support clearer access control, improved scalability, and better alignment with industry best practices. This update includes:

- ✅ **New Roles** introduced at both the **Organization** and **Project** levels to reflect user responsibilities better and streamline permissions.
- ❌ **Removed Roles** that were redundant, unclear, or tied to legacy behaviors (e.g., *Document Controller*, *Creator*).
- 🔄 **Updated Roles** with revised scopes—some existing roles have been renamed or had their permissions adjusted to reflect actual functionality.
- 🔒 **No Hidden or Implicit Roles** exist in the system. For example, *Project Creator* is not treated as a privileged role.
- 🛡️ **Admin Safety & Continuity Rule** to prevent accidental loss of administrative control, the system restricts the last remaining Org Super Admin or Project Admin from removing themselves unless another eligible user is first assigned to the role.

This **Roles & Permissions Model** follows the principles of **Role-Based Access Control (RBAC)** and adheres to international security best practices, including:
📘 **ISO/IEC 27001**: *Information Security Management* — ensuring that access is restricted based on business needs.
📘 **ISO/IEC 27002**: *Code of Practice* — applying the principle of least privilege and segregation of duties to minimize risk and ensure proper accountability.
📘 **ISO/IEC 29146**: *Identity Management and Privacy Technologies* — providing guidelines for role-based identity and access governance across organizational structures.
📘 **ISO/IEC 10181-3**: *Access Control Framework* — outlining foundational principles for designing access policies and controls through roles and permissions.
📘 **NIST RBAC Model (SP 800 series)**: Though not an ISO standard, this widely adopted model by the U.S. National Institute of Standards and Technology defines role hierarchies and permission management, offering clarity and consistency that many international frameworks follow.

The following sections outline detailed access matrices at both organizational and project levels.

Organization Level Roles & Permissions

		Org Super Admin	Org Admin	Org Member	Permission Key	Last Update	Implemented
1	**Admin Center**						
2	Access Admin Center	✅ Yes	✅ Yes	❌ No	Old: SYSTEM_ACCESS_ADMIN_PORTAL New: SYSTEM_ACCESS_ADMIN_CENTER	`Dec 7, 2025`
